History AutoCAD LT is the most widely used version of the AutoCAD software, and is one of the most widely used applications in the world, as it was originally released in November 1999 with a new name. In 1999, Autodesk released AutoCAD 2000, which was built from the ground up to use a database backend, and it introduced “paper space”. AutoCAD 2000 was released to the public, along with the AutoCAD LT software, for the first time. In 2006, Autodesk introduced AutoCAD 2008. AutoCAD 2008 included a version of AutoCAD known as AutoCAD 2009, which was named "AutoCAD R10". AutoCAD 2008 was also released to the public along with the R10 version of the software. AutoCAD LT was released in March 2005 as part of the "AutoCAD 2005" software suite, and was the first release of AutoCAD LT since it was first introduced in

November 1999. In addition, AutoCAD 2005 was the first release of AutoCAD to include a web-based application, the WebCAM, and to include optional Direct Connect. In September 2006, Autodesk introduced AutoCAD 2009. AutoCAD 2009 was a significant update to the application that included 2D drafting, 3D modeling and BIM. The AutoCAD 2009 application also introduced 3D interface, AutoLISP, Waterline, Resource Cache, Shape Tools, Axial Drawing, and Dynamic Input. In August 2008, Autodesk announced AutoCAD 2010, which included many new features, including the ability to import DWG files, dynamic input, lattice, MEP, and many other enhancements to the application. AutoCAD 2010 was available as an annual subscription only (versus an annual fee of \$49.99 for AutoCAD 2009) for 1-year trials. AutoCAD 2011 included many new features, including a new Windows XP look and

feel, Drafting Tools, Draw Order, and the ability to import 3D models. In addition, AutoCAD 2011 contained several new features, including a number of new tools and enhanced features. AutoCAD 2012 was released in January 2012 as AutoCAD 2009 plus several new features. In addition, AutoCAD 2012 was also available as AutoCAD 2012 as well as AutoCAD 2012 Ultimate for

Radiation enteritis is a

well-documented complication of radiation therapy. Although acute findings such as necrosis, ulceration, stricture, fistula, and intussusception are well known, the pathologic mechanisms that lead to these changes are not yet fully understood. To review the literature on the pathologic findings of radiation enteritis, focusing on the most recent and the most recent animal studies. Electronic databases (MEDLINE and EMBASE) were searched for articles describing the pathologic findings of radiation enteritis. End points for review were the pathological findings and histological features of radiation enteritis. To focus the review, only the most recent studies from the past 12 years were included. Fourteen studies were reviewed, nine of which were animal studies. Most of the animal studies employed a dose of radiation that was considerably lower than in human studies. Pathologic features included mucosal ulceration, collagen

degeneration, fibrosis, and vessel thrombosis. In the animal studies, the endometrium appeared to be most sensitive to radiation, followed by small intestine, colon, and stomach. To our knowledge, this is the first comprehensive review of the literature on the pathologic findings of radiation enteritis.

Determine if text is contained within an H2 tag I have a set of titles that I will need to search for in the DOM. The titles will be in an H2 tag and I will be using the class on the tag to find the title. I am trying to use JQuery to see if that text is contained within a H2 tag. I have tried using the text() selector but it doesn't seem to work. Here is what I have so far. Vehicle Title \$('vehicle-title').text(); Any help would be appreciated, thank you. A: Try \$('vehicle-title')[0].text(); Which will select the first text node of the first element with the given selector. issue in the context of a motion to vacate filed in the district court, however, "we will not consider any claim of ineffective assistance of counsel on direct appeal unless the record has been adequately developed." Daniels, 143 F.3d at 1086. The record is not sufficiently developed in this case to allow us to decide Mr. DeMauro's claim. 5 Although the government did not defend the district court's interpretation of § 924(e), which is arguably contrary to a well-reasoned and longstanding interpretation, it does not preclude us from upholding the district court's decision. The reasonableness of the interpretation of § 924(e) is not a question of constitutional importance. See Torres v. Lynch, 136 F.3d 716, 721 (2d Cir. 1998) ("It is not incumbent on the part of the [S]tate to show that a reasonable basis exists for the construction of a law of general application.").
