The Pentagon said Monday it has approved a plan to sell \$3.4 billion in military aircraft and spare parts to Saudi Arabia, the biggest such sale ever made to the Arab country. The U.S. State Department said in a statement that the deal will support "U.S. security cooperation in the Gulf region" and include parts for F-15 and F-16 fighter aircraft and the M1 Abrams tank. Saudi Arabia is

spending \$65 billion on defense over the next decade, the largest proportion of its defense budget of any Arab country, according to the Pentagon. It was not immediately clear if the sale included any aircraft from the United States that have been sold to Saudi Arabia. “The Defense Department is proud to partner with Saudi Arabia,” Defense Secretary Ash Carter said in a statement. “This will further strengthen our already strong ties with Saudi Arabia as we face common security threats.” A Pentagon statement said that Defense and State officials have been in discussions about the sale since at least 2013. The statement said that the sale will not be disclosed until it is completed and the president approves it. Run the game (check in the activation key) Press a key and keep it pressed for about 1 minute. Start the installation again and, in the main menu, change the "Show activation key" option to "Off" (or turn it to hidden as you wish). Start again the game with the previously activated key and, in the main menu, change the "Show activation key" option to "On". Do not worry: the code will not be saved in the database. How to find hidden data Before trying the keygen, it is recommended to scan the image of the interface, looking for a string, specific for the game, in the form of a linked image. It will help to better understand the search and to find the information contained in the database. For example: The bottom menu is displayed by pressing the "F" key. The screen "Welcome, welcome!" is displayed by pressing the "A" key. The text in the upper right "Product key: " is displayed by pressing the "B" key. The "B" key is used to lock the information. In this case the window will always display the "Product key: " string. Pressing the "B" key will bring up a menu that allows you to select a strategy. The "D" key is used to trigger a prompt dialog and to display data not included in the database. Example: The "E" key is used to get information about the engine, memory, etc. At the start of the game, the prompt displays the value of the unused memory.
