Plus, a lifetime crack.Q: Vue.js - how to use of dynamic componentId I have created a component and using it many times in the same page. Usually, the component has a \$el and it's prop name as prop, something like: If I change one prop, I need to update the component definition to get the new props. Eg: This will work but it's kind of tedious to do this manually. How can I get the new componentId once I change the prop? Can I get the component after creation? I would

---

prefer option 1 above because I would only need to change the component on-screen when the prop changes, not on the template. A: After looking into the docs, I figured out that you can use an event to trigger the
