Although Cracked AutoCAD With Keygen was originally designed as a 2D drafting application, today's model in AutoCAD 2011 is a 3D drafting and 2D drafting and design application. The release of AutoCAD 2011 included a focus on 3D design. AutoCAD 2011 uses a traditional paradigm for drawing objects, which consists of three sets of views: orthographic, perspective and free-hand. This article is the fifth in a series that introduces AutoCAD users to AutoLISP, an extension language of AutoCAD. What is AutoLISP? AutoLISP is an extension language that is embedded within the application AutoCAD. Using AutoLISP, you can extend the functionality of AutoCAD in various ways. AutoLISP is an interpreted programming language. The implementation is very efficient; AutoLISP is said to run 3 to 4 times faster than C++. There are two major approaches for adding AutoLISP code to AutoCAD: One is to use the AutoLISP framework. This approach is good for new users who don't have programming experience. AutoLISP is implemented as an extension language that you can use to extend the features of AutoCAD. With the AutoLISP framework, you write your AutoLISP code in a "class library." Classes can be used to create objects, and you can use these objects to automate tasks. The other approach is to use the AutoLISP language directly. Using this approach, you can learn and write your AutoLISP code directly within AutoCAD. With this approach, you create your code from scratch without the use of classes or objects. Using AutoLISP with AutoCAD, you can create custom commands that perform functions and create custom user interfaces. A custom user interface can be used in such a way that it appears as a menu bar, toolbar, toolbox, menu ribbon or command ribbon. When you create custom commands with the AutoLISP language, AutoCAD passes control to the custom command when the user selects it. How is AutoLISP different from AutoCAD script? AutoCAD script is a programming language that you can use to automate tasks within AutoCAD. Script code is interpreted by AutoCAD and runs in the background. Script code is processed before the user interface is
