
Computer Cleaner Activation Free Download [Updated]

Computer Cleaner Free Download [Latest]

Computer Cleaner Download With Full Crack is a simple piece of software developed to help users get rid of unnecessary files and thus save space on the hard disks. As compared to other similar programs on the market, Computer Cleaner adopts a wizard-like interface, so users are guided throughout the whole cleaning process. What's more, using this kind of approach, the application offers plenty of information on every single feature, which can be only good news for rookies who want to stay on the safe side all the time. First of all, Computer Cleaner prompts users to choose the drive to scan for unnecessary files, while it then requires them to pick the type of data to be removed. There are several options available, including temporary files, image caches, help file caches, log files, diagnostics files and backup files. The scanning process per se takes just a few minutes, but we've noticed a moderate CPU usage during the process. Computer Cleaner also recommends users to close the other running apps before starting a new scan. While the app cannot create a backup of the files to be removed, it can log every single action and even keep the logs for a user-defined period of time. Overall, Computer Cleaner serves its purpose although there are things to be improved. For example, support for many more browsers could help a lot, while a backup utility can only make rookies feel safer when removing some of the displayed files. The good thing however is that Computer Cleaner remains very easy to use and requires only minimum computer knowledge to do its job. Updates: Update One: Fix a bug when deleting a file. Update Two: Update to make sure the drive you choose to scan is the correct drive, update to make sure the backup files are created in the destination where you wish them to go. Update Three: Update to make the app save the logs at the end of the process. Update Four: Update to add the ability to have "Show all files" in the wizard when creating a new scan for all the drives. Getting Started: 1. Click to start a scan. 2. Computer Cleaner will look through a drive for unnecessary files. 3. Click the drive icon of the drive you want to scan. 4. Click to choose the extension to be scanned for. 5. Click to choose the type of data to be removed. 6. Click Next to go to the next step. 7. Click Cancel to abort the

Computer Cleaner Crack + X64 (2022)
