The fundamentals of Photoshop A new user will find it easiest to start Photoshop by importing an image from the computer or tablet device's camera roll or web browser. Selecting the correct size image to import is important. An image that is too small will be resized when you import the file, but it might be distorted when you save it. Many image-editing programs have the option to show different sizes on an image-editing window, so you can choose a smaller size to make your edits. To select an image, you'll need to know the location of the image's file on the computer. If the image is in the computer's primary or laptop computer, the location of the image's file is usually: /Users/YourUserName/Pictures/Filename.jpg. If the image is in the computer's mobile device, a folder called Pictures should be at the root of the device. If the root of the mobile device is the camera, /Camera/Pictures will be at the root. By creating an image editing window, the image will fill the entire window. It is also important to choose the correct background color for the image and window. If you accidentally leave the window with a solid gray background, you'll see the text "All layers are transparent" at the top of the image editing window and the current color of the background will be visible through the image. The first things you'll want to do is to add a background color to the image editing window. You can change the color of the background by choosing Image > Adjustments > Desaturate. This option removes the color that's been selected in the RGB Palette. It is also important to make the default selection for color mode. The default mode is RGB (Red, Green, Blue) color mode, but most image editing programs have a setting that lets you choose from other modes, such as CMYK (Cyan, Magenta, Yellow, and Black) or Lab (Lut of Color). To activate these settings, you'll need to choose Image > Mode > Indexed or Grayscale. To improve the image resolution, you can adjust the image's pixel size. The pixel size setting has two options: 1 px and 1 pixel. Using the Paint Bucket tool When you import an image, a Selection box will appear at the top of the image editing window. The box contains the color and shape of the entire

Scintilla (band) Scintilla is an electronic music band formed in Seattle, Washington by brothers David and Jason Chen, who first performed together as teenagers in the metal band Stuck Mojo. Originally named "Toxic", the band changed their name to Scintilla in 2007.

History Early years and Toxic (2002-2006) The original Scintilla formed in 2002 as Toxic, a duo with David and Jason Chen on bass and drums, respectively. Around the same time, they formed more experimental and experimental electronic projects, including the groups Stuck Mojo (which was renamed Scintilla) and Stolen Funeral. The band worked in relative obscurity through 2002 and 2003. They then released what was to be their first full-length album, Dodecahedron, in 2004, through Spacelab Records. The band achieved some success in Europe, holding up their own record release parties, and the follow-up disc, Coma Vacuum, came out in March 2005, in Europe and January 2006 in the US. The disc was rereleased in the UK by Unique Recording, and featured the B-side track "Daughter", which would appear on Scintilla's next full-length, 2007's Prisms. This is when the band began to gain a larger indie rock following. They continued to evolve musically, and began working with a wider array of electronic musical elements, and in 2006 and 2007 the band's sound grew increasingly electronic. Around this time, the band introduced a new drummer, Michael Phifs, who has remained part of the group since. Prisms (2007-2008) The band's next full-length, Prisms, was released in November 2006. The album, like Coma Vacuum, was self-released in Europe and independently released in the US. It was engineered by Brian Deck at Platinum Sounds studio. The record features guest vocals by Indian songwriter Ami Shami on "The Jello Set" and "Symphony in B"; there is also a spoken word and guitar-based track by songwriter Tim Jacobus on "Rain." The final track, "Daughter," was originally recorded for a six-song EP that was never released. In April 2007, Scintilla participated in Sonic State radio on WAQY, and were interviewed by Chuck Eddy. Soon after, the band performed at SXSWS, and also played at Sunset Tavern and the Victoria
