Replace Your Windows PDF Free Download Here. Patricia Raine.Q: Loop for each Item in List in C# I have a List which contains multiple items. Each item has a List which contains multiple names. I want to loop through each item in the List and I want to be able to do operations on each item using the item's List. Can someone please suggest me how I can loop through each item in the List. A: You can use a foreach loop to loop through each reader in the list foreach(var rdr in mySqlDataReaderList) { // Use rdr's List } If you have a collection of SqlDataReader you'll need to iterate the list of SqlDataReaders themselves. foreach(var rdr in mySqlDataReaderCollection) { // Use rdr's List } A: The other answer is a great suggestion. What I want to add to that is that usually you don't want to do your data processing in the loop where you iterate over a collection, as it usually only makes sense to do the processing on each item in the collection once. In this case I would recommend changing the data processing code to accept the reader as an argument: void Main() { //... List names = null; foreach (SqlDataReader reader in mySqlDataReaderList) { names = reader.GetString(reader.GetOrdinal("Names")); } // Use names here } A: In
