Surat Al-Baqarah Translation For all ages! The following translation is now available in English (PDF): Al-Baqarah ` a complete translation is now available for download in English (PDF): Ehsan Ali Tafsir of Surah al-Baqara - English Full text (Download for offline): "Say: it is enough that your Lord is witness to all that you do." (2:143). the Holy Prophet Muhammad (saw) was warned to do good things and avoid evil deeds and not to disobey what Allah (swt) is to see. The message is to do good things and not to disobey what Allah (swt) is to see. "He who has believed in Our verses, then he has submitted himself to Us, then he has set his face to perform As-Salah (Iqamah), then he has observed [in the Qur'an]- Our verses (al-Qur'an) and kept away from the Shirk (associating partners with Allah), then he has devoted himself to good, then he has truly believed: for then he will enjoy the Mercy of Allah (swt)." [5:3] "Allah has decreed, that those who believe and work righteousness, He will admit them unto Gardens under which rivers flow." This is Islamic e-book; is recited in wazaa az-zahr of allah in quran. every evening. There is 14 links when you click on surah al baqarah of surah. How to download these links?Q: How to import a custom module in a TypeScript file with an Angular 6 CLI application I've recently started working with Angular 6 CLI and I've installed the Angular Language Service plugin. In my tsconfig.json file I have specified: "compilerOptions": {

"noImplicitAny": false, "module": "es2015", "moduleResolution": "node", "allowJs": true, "preserveWhitespaces": false, "baseUrl": "./", "paths": { "angular6*": ["node_modules/angular6/bundles/*"], "node_modules/angular6/node_modules/*": ["node_modules/*"] } } In my CustomModule.ts file I have defined the following: import {CustomComponent} from './CustomComponent'; declare var CustomComponent: CustomComponent; export { CustomComponent }; And in my app.module.ts I have this: import { CustomComponent } from './CustomModule'; @NgModule({ declarations: [// custom component import here], imports: [CommonModule, FormsModule, HttpClientModule, CustomModule, HttpModule], exports: [CustomComponent], providers: [] }) export class AppModule {} For some reason, I'm unable to import the CustomComponent into my app.module.ts

file. I have tried to follow the instructions here: with no success. In my CustomComponent.ts file I have also tried to import the CustomComponentModule like this
