Filmlight Baselight for Avid 5.2.11949 | 8.2Mb.  
Before i started using baselight for avid i used the standalone version which works fine with avi files of all types. The one thing that bugged me is that is is not a realtime or realtime. With the avi files it is well integrated but with other media types (mp4) its a bit clunky. Anyway once i found out about baselight for avid i immediately grabbed it and started. It is probably the best plugin i have ever used. Aside from the avi plug in and and the baselight project the only other one i have used. I have used baselight and filmlight baseline with fire rd and i am also using it in nuke right now. I think

it is the best plug in ever for any media type out there. I am. And now that i have this version i am so happy. I have it downloaded and installed. And it works beautifully. Its the perfect complement to baselight and fire rd. i mean you can always use fire rd and baselight together but i find its a lot easier and more enjoyable when you use the baselight for avid. And this plug in makes it perfect. It even works with realtime (umta) and realtime. Plus you can switch between realtime(umta) and traditional. Which is pretty much the norm. I dont have any issues at all i think it is the best plugin out there and im sticking with baselight for avid with fire rd. And they both work together so well that i dont see the need for realtime. And this software does realtime better than any other realtime out there. I have used nvidia after effect and final cut pro. And i think i found my answer here. I mean for the money its the best. I have always paid for the same item and i love this plugin. It is awesome and so friendly and easy to use. I can never say enough good things about baselight. If you already know of baselight and you want to up your professional skills here is the best choice. Its money well spent. No

doubt about that. I mean no other realtime plugin out there comes even close to baselight and the baselight for avid plugin. It works with many different types of media. So get it and use it. You wont be sorry. On July 1, I tried to login with my Launch
