Q: Property of homology sphere volume in S^3 In Hatcher's Algebraic Topology, page 302, there is a property about the simplicial volume of a 3-manifold. There is a construction from Δ to a simplicial complex $\hat{\Delta}$ using the barycentric subdivision. Suppose that Δ and $\hat{\Delta}$ are homeomorphic. Then we get that $\operatorname{sd} M \simeq \hat{\Delta}$. I do not understand the intuition behind this construction, and therefore, I do not know how to apply it in any concrete situation. Thanks!

A: Think of it as a geometry-lifted version of a barycentric subdivision. Your barycentric subdivision produces a regular subdivision of your polytope Δ: given any simplex t of Δ and a collection of points p_i with $i=0,\ldots,k$ in Δ s.t. $\sum_i p_i=t$, create an (equivalent) simplex t' in $\hat\Delta$ by taking the convex hull of t and $\{p_i\}$. (In particular, you can do this for the top-dimensional simplex of Δ.) This process can be de-geometry-lifted just as in the first barycentric subdivision. So the geometric intuition is that it just b
